Comunicare in inglese con una terminologia appropriata rappresenta per professionisti e tecnici italiani, impegnati sempre più frequentemente sui mercati internazionali, una concreta certezza di successo negli interventi di progettazione, realizzazione, consulenza e commercializzazione.

dEUS

dEUS_THE ARCHITECT - Vantage point

(Ah, nevermind that outer space stuff,
let's get down to earth!)

What is the architect doing?
He is by the riverside
What is he thinking out there?
He is committing egocide
Now isn't that a strange thing?
Well, to him it feels just
Oh we guess a person's gotta do
What a person feels he must

He said:
"I won't throw myself from the pier
I'm gonna go home and shut up for a year
And when the year is over I'll reappear
And have a solution"

I've reason to believe that what I find
Is gonna change the face of humankind
And all these years before, well I was blind
That's my conclusion

Cause I'm the architect
(I feel it's touch and go)
Cause I'm the architect
(I feel it's touch and go)
Cause I'm the architect

Now the man has understood
That outerspace is overrated
About all the problems on this Earth we should
Worry now to solve them later
And so he's brooding and alluding on a perfect design
He thinks that working on behalf of himself is a crime

PILLOLE DI ARCHITETTURA "A LA CARTE"

Lost in translation Inglese per l'Architettura / English for Architecture

International Passive House Conference 2012
Hanover 4,5 maggio 2012.
Per maggiori informazioni.

Termine del mese

Passive House - A Passive House is a very well-insulated, virtually air-tight building that is primarily heated by passive solar gain and by internal gains from people, electrical equipment, etc. Energy losses are minimized. Any remaining heat demand is provided by an extremely small source. Avoidance of heat gain through shading and window orientation also helps to limit any cooling load, which is similarly minimized. An energy recovery ventilator provides a constant, balanced fresh air supply. The result is an impressive system that not only saves up to 90% of space heating costs, but also provides a uniquely terrific indoor air quality. **Per maggiori informazioni.**

Dizionario tecnico

furnace	caldaia
thermal bridge	ponte termico
heat loss	perdita di calore
airtight	a tenuta d'aria
joint	giunto
heating demand	richiesta di riscaldamento
pollutants	inquinanti
heating output requirement	potenza termica richiesta
household appliances	elettrodomestici
draughts	correnti d'aria

CONTRACT e GLOBAL, tutti i segreti del successo

Chiavi in mano > Turn key

A turnkey contract is a business arrangement in which a project is delivered in a completed state. Rather than contracting with an owner to develop a project in stages, the developer is hired to finish the entire project without owner input. Design is generally not included.

Contract > Design-Build contract

With a design-build contract, the owner awards the entire project to a single company. It is typically awarded to a contractor, though architects or engineers may be awarded a design-build contract in some specialized cases. Once the contract is signed, the contractor is responsible for all design and construction work required to complete the project. This system allows the owner to deal with a single source throughout the duration of the job, rather than coordinating between various parties.
